Based on Standards… Powered by Open-Source

Transforming Specs into Implementations via Open-Source Software

5G MAG REFERENCE < TOOLS />

Collaborate. Create. Play

- Standards validation, interop, early prototyping and testing
- Shared development effort avoids duplication across companies
- Ready-to-use code in production environments and as benchmark
- Transparency, trust and collaborative enhancements

5G-MAG Reference Tools' Projects

Application domains of the 5G-MAG Reference Tools Software Projects

Streaming, Media Delivery and Data Collection
3GPP + CTA SVTA DASH

5G Broadcast for TV, Radio and Emergency Alerts
3GPP + ETSI IETF

Multicast and Broadcast Services in 5G Networks
3GPP + IETF

XR: 3D Scenes and Avatar Communications
3GPP + MPEG KHRONOS

Volumetric Video and Beyond 2D Video Experiences
3GPP + MPEG

Applications and Services using Network APIs
3GPP CAMARA

Build an Application | 5G-MAG - Reference Tools

5G-MAG Reference Tools - Roadmaps

All | 5G Media Streaming | 5GC Components | UE Data Collection | 5G Broadcast | Emergency Alerts 5GBC | Multicast Broadcast Se | Multimedia Content De | XR Media with MPEG-I | V3C Immersive Platform

label:"Project: 5G Media Streaming"

Candidates 1
This is a candidate for future work.
- Getting-Started #126 Advanced Media Delivery (AMD) - In-band reporting of CMCD information

+ Add item

Under Study 1
This is under study.
- Getting-Started #137 Cloud Deployment support

+ Add item

Under Development 4
This is actively being worked on.
- Getting-Started #132 Dynamic Policies (M1 Policy Templates API + M5 Dynamic Policies API)

+ Add item

Completed 0
This has been completed.

+ Add item

Completed + Tested 6
- Getting-Started #134 Consumption collection and reporting
- Getting-Started #130 Implementation of M1d Provisioning APIs
- Getting-Started #133 QoE metrics collection and reporting
- Getting-Started #129 Implementation of AF to AS RESTful OpenAPI (M3)
- Getting-Started #128 Support for basic media session handling (Application Function + Media Session Handler)
- Getting-Started #127 Support for basic media stream handling (Application Server + Media Stream Handler)

+ Add item

All the contributions, on-going developments and opportunities for contributors

An IPR-friendly License Model

A License Model for contributions and usage adapted to industry's needs

5G-MAG balances open-source collaboration with commercial-grade IPR protection, ensuring a sustainable ecosystem for technology implementation.

Software & Dependencies

- Main Repositories: Covered by the **5G-MAG Public License** to protect contributor IPR.
- Third-Party Code: Utilizes forks of external projects to maintain baseline compatibility.

5G-MAG Public License v1.0

- A modified **Apache 2.0 license aligned with ETSI/3GPP FRAND policies**.
- Free Use: For non-commercial, research, and testing purposes.
- Commercial Use: Includes a patent clause allowing contributors to license IPR under Fair, Reasonable, and Non-Discriminatory (FRAND) terms.

Contributor License Agreement

- To cover code contributions from Individuals/companies
